This document provides an overview of "Initiative Raspberry," a project to develop a scalable, real-time analytics platform.

- The project, managed by Danielle Dannenberg, aims to create a user-friendly platform for complex data analyses, integrating at least 10 data sources and incorporating advanced analytics tools.
- Key milestones include architecture design completion (March 15, 2024), development phases, testing, and a final launch targeted for September 30, 2025, with a budget of \$2.5 million.
- The project team includes a data architect (Navneet Kumar), lead developer (Pubudu Dodangoda), and UI/UX designer (Finch Grace).
- Risks such as data integration complexities, potential

  Write  Record

missing a hand. I had to push three buttons at the same time and my left hand was really close to the blade that was spinning. And it also pointed straight to my face. Since I thought I've understood instructions and I didn't have a very good feeling about this tool, I decided to put it aside and focus on some other work that I had to do. But I came back to it because I've set myself the goal that when I will be back from paternity leave, I will have my own office again. So I got back to it and then I found out that apparently I was using it wrong as you can see on the picture there's this metal box on top of the machine and using this Box 1st of all gave protection for my hand for my face but also meant that I didn't have to push three buttons anymore. So with new confidence I got back to work and as you can see on these pictures I built the drywall and I now have an office again in my basement.

You might be wondering why I'm telling this. Well having set a goal defined my action so I had to come back using that machine building a drywall it gave me motivation since I could see the progress keep working on it but the most important part is this is also our first lesson for using AI is an ailment or self enablement because there are instructions on how to use AI in a good way in the end it's also up to each individual to enable themselves on how to work with AI. What kind of cases fit in your workflow in how you think how you operate and how you want to achieve your goals.

 What are the three key takeaways?

1. **Goal Setting and Motivation:** The author highlights the significance of setting clear goals, which can drive motivation and help overcome challenges. The goal of creating a new office space motivated the author to learn how to effectively use the woodworking tool.

2. **Learning from Experience:** The initial difficulties with the woodworking tool illustrate the importance of learning from mistakes. The author discovered a protective feature that made the tool safer and easier to use, emphasizing the need to understand and adapt to tools or technologies for success.

3. **Self-Enablement with AI:** The experience serves as a metaphor for using AI, suggesting that individuals must take the initiative to learn how to integrate AI into their workflows effectively. Just as the author had to enable themselves to use the woodworking tool, users must understand how to work with AI to achieve their goals.

Get to the point of whole conversations

The screenshot displays the Jira web interface. At the top, the navigation bar includes the Jira logo, 'Your work', and various project management tools like 'Projects', 'Filters', 'Dashboards', 'Teams', 'Assets', and 'Apps'. A search bar is located on the right. The left sidebar shows the 'Mobile Dev Software project' with sections for 'PLANNING', 'DEVELOPMENT', and 'OPERATIONS', along with a list of project pages and shortcuts.

The main content area shows the issue 'Mobile User Registration' (MOBL-343) under the 'Mobile Dev' project. The issue description states: 'As a user of MFIRST, when I want to register for the system, I want to be able to do so in order to access its features and functionalities.' Below the description, the 'Linked issues' section shows a clone 'MOBL-49 Mobile User Registration-Demo 14th Feb'. The 'Activity' section is currently set to 'Comments'.

An orange-bordered box highlights a summary of the conversation generated by Atlassian Intelligence. The summary is titled 'Only visible to you' and contains the following text:

This ticket outlines the task of implementing a mobile user registration feature for the MFIRST system.

- The issue is critical and involves resolving login problems reported by users, specifically "Invalid credentials" errors.
- @Alana identified a potential issue in the authentication code and has pushed a fix for testing.
- @Matt will monitor user feedback, while @Mitch tests the login process to ensure the fix resolves the issue.

At the bottom of the summary box, it states: 'Content is based on your permissions, and its quality may vary' and 'Powered by Atlassian Intelligence'.

On the right side of the interface, the 'Details' panel shows the issue's metadata: Assignee (Phillip Kuchem), Reporter (Lazar Deretic), Team (Mobile Dev), and Components (mobile-primary). The 'Development' section includes an 'Autodev' note and a 'Code with AI' button. The bottom right panel shows various issue-related actions and links, such as 'Create branch', 'Create commit', 'Release v1.0', 'MOBL Sprint 1', 'Story Points' (5), 'Labels' (None), 'Priority' (Critical), and 'Parent' (MOBL-2 Mobile App Authenti...).

The **Mobile First Experience** is a strategic initiative aimed at enhancing the mobile application experience to meet the needs of modern users, particularly targeting the 18-35 age bracket. This approach focuses on developing a mobile app that is optimized for specific platforms like iOS and Android, ensuring compatibility across a range of devices and screen sizes. The goal is to provide a seamless, intuitive, and secure user interface that allows users to perform all necessary functions on their mobile devices, similar to what they can do on the web.

Team sync – notes

- Project launch
- Launch Date May 5
 - Marketing starts May 10, need to finalize the plans
 - Check the stock levels before end of April

We talked about the budget and noticed that we're spending too much on ads. Need to think about where we can cut costs. We should have a proposal ready by April 20.

Improve writing ✕

During the budget discussion, it was identified that there is excessive spending on advertising. The team agreed to explore potential areas for cost reduction to address this issue. A proposal outlining potential cutbacks is targeted to be finalized by April 20.

AI work breakdown in Jira

Implement real-time vehicle tracking on main fleet dashboard

+ Add @ Apps

As a fleet manager, I want to receive real-time alerts on the dashboard when a vehicle in my fleet is involved in an incident, such as a collision or breakdown, so that I can quickly respond and minimize downtime.

The real-time alerts should be prominently displayed on the fleet management dashboard, using a visually distinct notification style (e.g., a pop-up message or a dedicated alerts section). The alerts should remain visible until acknowledged by the fleet manager, at which point they should be logged in an incident history for future reference.

Implement real-time vehicle tracking on main fleet dashboard

+ Add @ Apps

Objective:

Receive real-time alerts on the dashboard when a vehicle in my fleet is involved in an incident

Benefits:

We aim to improve real-time alerts on the dashboard when a vehicle in my fleet is involved in an incident, such as a collision or breakdown, so that we quickly respond when our team needs help.

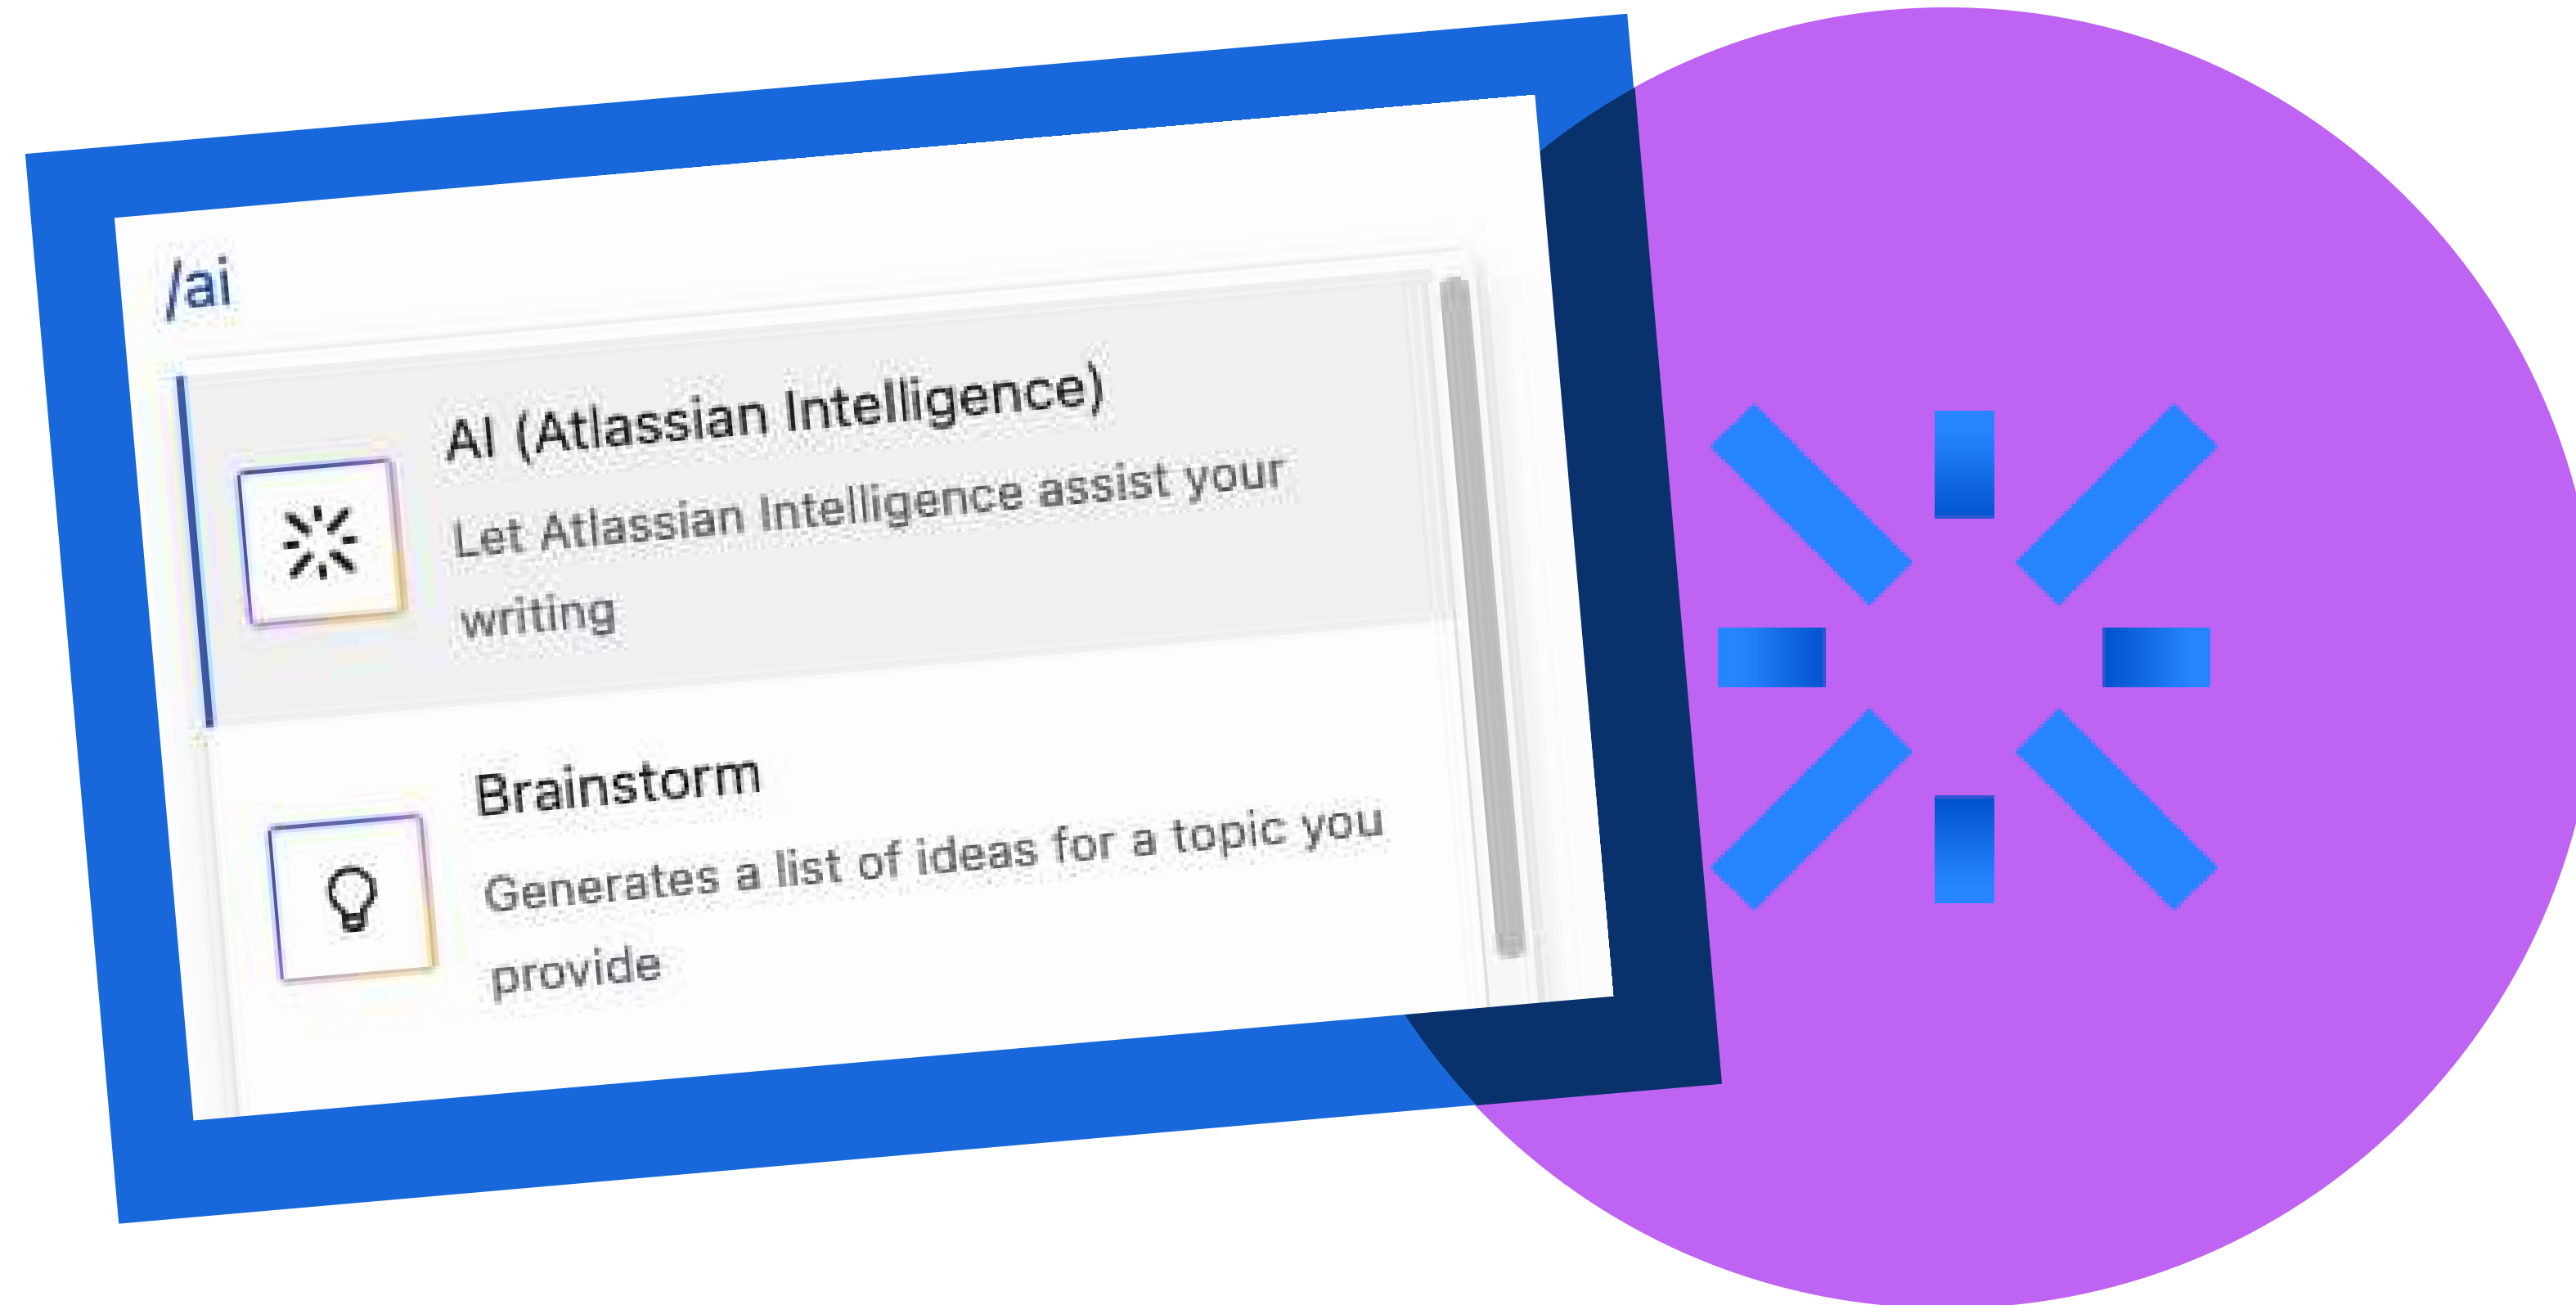

Acceptance Criteria:

1. Successful Implementation of real time alert system
2. Implementation of dashboard into existing dashboard systems.
3. Fully tested and received 100% uptime on test database.

Definition of Done:

Full rollout and commissioning of the incidents alert dashboard, achieved 98% uptime on the service, All in service vehicles in the fleet are fitted with the new Incident alert devices.

Zoom transcript 1Zoom transcript 2Zoom transcript 3

Zoom Transcript:

00:00:01 - Alex Turner:

"Hello everyone, welcome to our session on enhancing team collaboration. Can you all hear me clearly?"

00:00:05 - Maria Lopez:

"Yes, Alex, we can hear you. Excited to learn about the new tools!"

00:00:12 - Alex Turner:

"Great! Today, we'll be showcasing tools that can improve our team collaboration and productivity."

00:00:20 - Chris Evans:

"Looking forward to it. We've been eager to see how these tools can streamline our processes."

00:00:30 - Alex Turner:

"Let's dive right in. We'll start with an overview of the new communication platform, which offers enhanced integration features."

00:00:40 - Jamie Lee:

"The platform looks intuitive. Can you show us how to integrate it with our current systems?"

00:00:50 - Alex Turner:

"Absolutely, Jamie. You can easily integrate by selecting the 'Settings' icon here, and then choosing the options relevant to your workflow."

00:01:10 - Maria Lopez:

"That's very user-friendly. How about the analytics feature?"

00:01:20 - Alex Turner:

"Good question, Maria. Our platform now supports detailed analytics to track team performance and project timelines."
